D1.4: Risk Register and Ethical Compliance Assurance documentation

WP1, Task 1.2.3: Risk, quality and ethical compliance management

Authors: CKA with the support of UNIFG, UGent, Teagasc, EFB, ZLTO, YOURIS

Abstract

This document accompanies D1.1 the Quality Assurance Planning Manual. It contains an explanation of the principles of risk management applied in this project. The QA Manual adequately addresses operational risks on the basis of the extended list of deliverables, the use of alerts and other basic management tools. This deliverable deals with technical and scientific risks associated with each task of the SKIN project, which may have an influence on the overall scientific adequacy and impact of the project. Some of these risks relate to ethical issues such as compliance with new legislation pertaining to the treatment of privacy and personal data. These issues are dealt with in D7.1 the POPD Requirement No. 1. The QA Manual is a public document, whereas both this document D1.4 and the document D7.1 on ethics are internal documents accessible only to the members of the consortium.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N°728055.
